First of all it is the sound quality, which is top notch on CT-X700 with its modern AiX sound chip. When I tested CT-X700 last year I was blown away with the quality of sound it produced, because for such a price (it costs less than 200 USD) it sounds like a professional 1000-dollar instrument! Of course this is my subjective feeling, but I¢ÃÂÂm continuously testing many keyboards, and I have some experience in that. It didn¢ÃÂÂt even have backlit (c¢ÃÂÂmon Casio, even the keys light up, and you couldn¢ÃÂÂt add a couple of LEDs to the screen?). Most popular CT-X models are CT-X700 and CT-X3000 (or CT-X5000). The Casio CT-X keyboards Casio CT-X Line, which first appeared in 2018, is famous first and foremost for its sound engine called AIX. Casio LK-280 The bad thing about the lesson system and its own MIDI files in the LK-280 is that if you want to split the file into small pieces for practice, you can't specify the split point. The rest of the design hasn't changed significantly. Pros: The AIX sound chip offers a realistic and very realistic musical instrument, voice, many tones and reasonable light rhythms -priced compatible with the MIDI software can be powered by six-track batteries of the recorder lessons system, displaying proper notes and fingering cons: the printed manual It has very small font, It's not so easy to prepare the weighted keys (but this is common in this price range), there are several "packs" of the CT-X700 available on Amazon. On the PX-360, Casio improved that. You won't notice the difference can be heard a little if you hear the piano solo sound, especially through the headphones. You'll have to look at the tutorial or look for instructions on YouTube. Very recommended. If we talk about disadvantages, I can say that I was not impressed by the LCD screen of the LK-265. Another great thing about the CTK-6250 is the built-in sequencer that allows you to record 16 tracks by mixing 32 channels. Here are some features that the PX-560 has versus PX-360: Tone Editor. Secondly, CT-X700 has a very friendly user interface, so if you are a beginner it will be easier for you to get started. It will help you learn to play a few pieces of music, but it will help you learn music. The keyboard has 48-note polyphony, 400 tones and 100 rhythms. Both keyboards are great and you have to choose for features: if ´Angle doesn't need a workstation and you only want great sounds for a reasonable price, then I recommend CT-X700. I consider this keyboard to be one of the best in its price class. You don't necessarily have to look at the 88-key weighted piano if you're not in the room, but I recommend eating with at least Casio CTK-3500 model or higher. It has 128 standard polyphony notes. What I liked about this keyboard (except the red color included on its top) You can't adjust the volume of the support rhythm and solo voice independently. Duet mode. I would categorize Casio keyboard instruments into 3 large parts: Portable keyboards, Stage pianos and console pianos. This is the top Casio keyboard in the CTK line. With the help of the Casio learning system and a little perseverance you won't achieve this very quickly. I liked Casio's SHA II Tri-Sensor keyboard better than Yamaha's 2-sensor GHS (Graded Hammer Standard). Alà ©m of the mentioned these two pianos are practically the same. But you will not need if you study seriously, in this case I recommend that you look at the digital piano of the CTK series or higher level of the CGP series. So my suggestion for you is to test both if they are available at at local store. I recommend it to my students who want to have a good instrument from the beginning, or to enthusiastic amateurs who are within the budget. As for color, the PX-360 now has fewer buttons, because the touch screen provides much easier function control. Although it costs twice as much as the CTK-2550, but certainly worth it. Although it is guite cheap, but it has everything you need to take piano lessons or play for its own. Yes, sometimes when I go to sleep, an inspiration can come and I urgently need to touch some moms that came to my mind in order to remember. It is even more compact (its length is less than 18 €) and ideal children of 2-3 years. Now you have to press the botan for a while before the energy is turned off. The most notable difference outside the PX-350 is a large, succulent screen located in the center of the main panel. They are designed mainly for children, and you may be surprised if I tell you that me, being a professional pianist, I have SA-76 at home. This modern Casio keyboard quickly gained popularity by its prison, sound, ease of use and many functions. In addition to the great sound quality aix chip, which is a distinctive feature of all CT-X keyboards, other highlights of the CT-X3000 and CT-X5000 that I must mention. Most professionals, and I also, agree that the lit keys are a trick. Cons: If you have big fingers, casio sa series can not be suitable for you, since the keys are not so large as the big piano keys do not wait for this keyboard sound as an instrument of \$ 1000. I hope it will help you find your ideal casio piano. Both engines use high quality tail piano samples, but MXI lacks resonance of characters, off key and hammer response simulation, and linear morphing. And another feature is the compatibility of the SD card to save your or the keyboard data to the card. So be sure to buy a healthy electrical support for your LK-280, as well as support pedal and headphones to train in Silãancio. Nowadays, when there are lots of online piano lessons on the internet, integrated lion necessary. The support will include plenty of 3 and will be more than enough for the keyboard.
